

#diffusionfilter

Maximum control: For a soft image and rich blacks

Description

Black Frost® filters provide a subtle diffusion effect and an overall softness of the image, while still allowing to control shadows and to capture rich blacks. With thousands of carbon particles in dedicated sizes, the filters introduce precise amounts of light diffusion while controlling stray light and flare.

Application

For unique image styling. Black Frost® creates an almost airbrushed look. A fine black mist flairs highlights, tones down contrast while retaining rich blacks.

Key Features

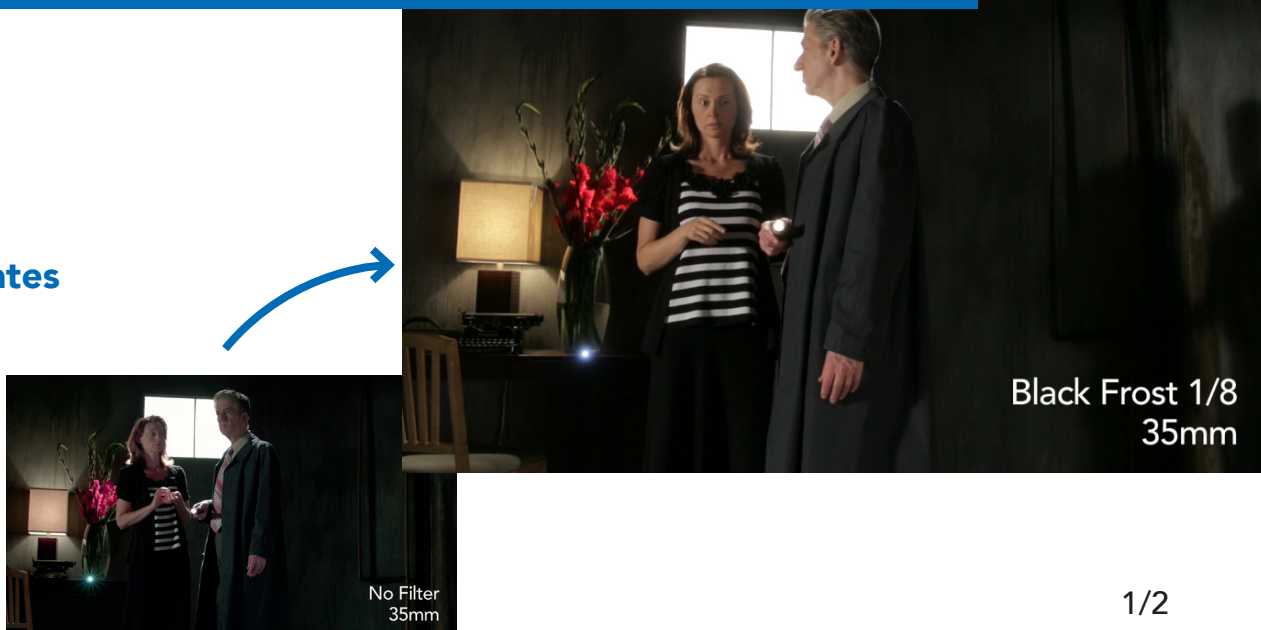

- Reduces contrast for a soft overall image
- Maintains control over flares and shadows
- Retains rich blacks
- Mutes colors
