

#neutraldensity

The truly color-neutral Full Spectrum ND Filter line.

Description

RHOdium® FSND filters provide consistent filtering of the full light spectrum from 350-1.000 nm and eliminate IR pollution on all sensors without any color cast. They are designed to meet even the critical color standards of 4K, 6K and 8K resolution cameras.

Application

RHOdium® FSND filters reduce the amount of light entering the sensor. 10 dedicated one-stop steps give full exposure control, independent of iris and focal length. Further products of this filter line: RHOdium® FSND Graduated filters.

Key Features

- Available in 10 stops from 0.3 - 3.0
- Eliminates IR pollution
- No color shift, even at short focal lengths
- Color / density consistency throughout all stops
