

## #dioptr

### Reduce close focus distance

#### Description

Shortens close-focusing distance of lenses by reducing the focal length of the optical system. The higher the strength the shorter the focusing distance. The strength is given as reciprocal of focal length in meter, so called diopter, e.g.: +1 diopter=1 m infinity focus plane; +2 diopter=0.5 m infinity focus plane.

#### Application

Dioptr Full allows you to take macro images without using a dedicated macro lens. It reduces the close focus distance when using vintage glass, especially anamorphic or zoom lenses that do not focus as close as primes.

## Key Features

- Macro images without dedicated macro lens
- Available as drop-in or screw-in filters
- No exposure compensation
- Broadband coating (BBAR)

#### Sizes Drop-In

138 mm Drop-in  
4.5 inch Drop-in

#### Sizes Screw-In

M95
